## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-20 is indefinite, confusing, and cannot be understood. In claim 1, it is not clear if the method in claim 1 is a cleaning method or any other method.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Archer et al. (4,996,951).

Archer et al. disclose a method and system for controlling soot removal in a heating device. The reference discloses the optimization in the boiler operation. See the

abstract, col. 1, lines 10-57, col. 3, lines 1-15, col. 4, lines 26-col. 5, line 46, col. 7, lines 1-14, lines 41-57, col. 8, lines 6-51, and claims 1-3, 7-8.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Batey et al. (4,864,972) disclose boiler optimization for multiple boiler heating plants. James (4,814,868) discloses apparatus and method for imaging and counting moving particles. Klatt et al. (4,466,383) disclose boiler cleaning optimization with fouling rate identification. Perrone (6,325,025) discloses sootblowing optimization system.
